Projects

- 2011 Fotodex
It started as a hobby project with a simple platform developed by a friend. In time became the reason I learn web developing. The second version was a simple WordPress that I installed and modify for my needs. Now is designed from scratch and is the medium where I try every idea I have that is implementable on web.
- 2016 Track my vibe [Tremdix]
It started as an idea to help physicians to objectively diagnose and monitor Parkinson's patients. Now there are two prototype versions developed in partnership with a team of neurologists.
- Business incubator [Innovation Labs 2016]
Business incubator Semifinalist [Chivas the Venture 2016]
- 2017 TechDex
Track My Vibe was the platform to develop devices to help physicians. During this time we worked also with stroke patients and athletes to improve muscle control. With this project we created TechDex, a platform to unify devices for patients and athletes to improve muscle control or to monitor muscle spasms.

Thank You,
Hope to hear from you soon.
